

HW2 - Plan Site and Semantic HTML Execution - Site Build Out Phase 1

A summary of purpose of the site: This site will be containing a brief biography about me. A short summary of each project and product that I have been part of. It will include visual input output for each project. The page will contain subpages linked to the main page to avoid too much crowd. This page will target recruiters and HR directors of companies that I apply for. The design, user experience of this page will give the user a good understanding of my website designing skills.

Persona diagram:

“If you're offered a seat on a rocket ship,
don't ask what seat! Just get on.”
— Sheryl Sandberg

SARA SAMANCHA

WHO AM I ?

ABOUT ME

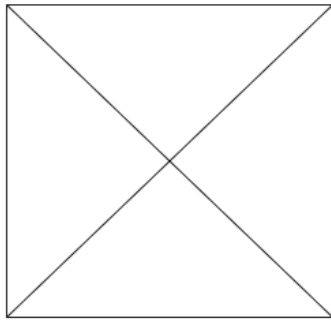

I am a front-end developer from San Diego California. I enjoy taking real world problems and turning them to simple and meaningful user interface designs. I also have a great understanding of back end software structure so I can sometimes enjoy being a full-stack.

When I am not coding, you will find me lap swimming in the pool.

Technical requirements:

- Mobile responsive design. The site needs to be responsive when opened in a desktop site and a mobile view.
- Needs to be SSL certified for a secure connection between the user and server.
- Website needs to be supported by chrome, opera, edge, safari and Firefox.
- The page load time should be less than 10s.
- The html needs to be easily implemented JavaScript and CSS on.
- Total bytes shouldn't be over 10 mb.

Content requirements

The contents not only involve plain text but also images, tables, links, logos, dividers, borders, sections and later on when CSS and java script is implemented, the content will include animations, interactivity, and more advanced graphics. My photos, links to my resume, cover letter, social media accounts, projects GitHub links, projects screenshots and etc. all of the above contents need to be supported and runnable by the website.
